

Headley Court Veterans Centre, Oswestry

Commitment to achieving *Net Zero*.

Clancy Consulting is committed to achieving Net Zero emissions by 2045. As part of this commitment, we undertake Carbon Reduction Projects and demonstrate our reductions in emissions over the period leading to net zero.

Part of our journey towards net zero includes a commitment to becoming carbon neutral through offsetting by 2030.

Baseline Emissions Footprint

Baseline Year: 2019

The detail of our baseline emissions can be found in a separate baseline report that shows each of the emissions we have measured. Our emissions are split into the three Scopes as follows:

Scope 1 direct emissions apply to emissions directly associated with the companies facilities and companies vehicles. We occupy offices and have no manufacturing or process facilities that use energy. Furthermore, we do not operate company vehicles. Therefore we have no Scope 1 direct emissions.

Scope 2 indirect emissions apply to energy emissions used as part of our operations. This is applicable to us in terms of our office energy usage. Scope 3 direct emissions applies to upstream activities. This is our single largest Scope and covers our purchased goods (IT and Stationary), Staff Commute and Business Travel.

Scope 3 indirect emissions apply to downstream activities, as we do not make or sell products for sale we have no Scope 3 Indirect emissions.

We have chosen to use 2019 as our baseline year as this will show our most intense energy use, using a later year would have included factors associated with working practices during Covid 19 and would have show a reduced carbon footprint due to remote working and greatly reduced travelling.

Baseline Year Emissions	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	0.0
Scope 2	106.9
Scope 3 (included sources)	295.5
Total Emissions	402.4

Current Emissions Footprint Current Year: 2022

Our current years emissions can be found in a separate report that shows our measured emissions.

When these emissions are assessed by scope against our Baseline year, we show that we have reduced our total emissions by 10.9%.

Our total emissions have reduced despite increased turnover, along with the inclusion of home working energy use not previously accounted for.

Current Emissions Reporting	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	0.0
Scope 2	105.22
Scope 3 (included sources)	253.49
Total Emissions	358.71

Emissions Reduction Targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 340 tCO_2 by 2027. This is a reduction of 15%. We aim to achieve this by implementation of:

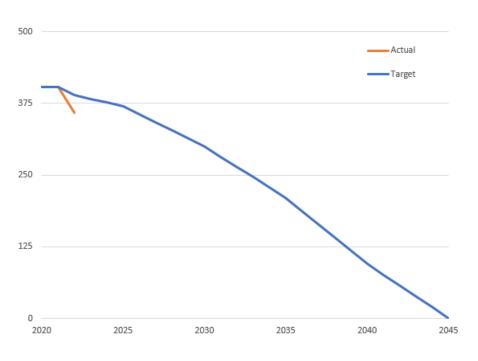

- reduced commute emissions resulting from implementation of EV schemes and flexible working arrangements
- reduction in business travel emissions by reduced journey numbers and increased use of EV and/or public transport
- reductions in use of paper in line with more paperless working practices
- use of green energy tariffs where possible for our offices
- lease renewals will be considerate of our plans for net zero

We will carry out further assessments of our supply chain and aim to align the suppliers we use to our own targets wherever this is possible.

In addition to the above measures, we will start carbon offsetting over the next five years with a view to carbon neutrality in 2030 in advance of net zero.

Our planned emissions target can be seen in the graph below against our progress to date.

Carbon Reduction Target

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors.
